## PROJECT

### varasolutz(real estate website using plugins)

- this is a fullstack website where user can post a property ,they can login and signup to the website , they can post the location of the property using google map
- they can edit the post which they have posted ,the interesting feature is until the admin gives the permission there post is not published
- in this website there payment system developed to access membership(upi,net banking,credit,debit)
- user can compare two properties and even calculate their loan amount etc...

### weather forecast(using react and some api)

- integration of weather api with openweather website to fetch data and display tmperature,humidity,wid speed etc
- implementation of search functionality by city or zip code
- applying responsive design techniques to ensure the flexibility
- Displays a animated web page which shows signup and
